### Introducing 30% smaller Power Inductors for High Frequency Applications

*Shelton, CT.* The Alpha-Core Division of Bridgeport Magnetics Group Inc. introduces a line of high power inductors for high frequency applications with a minimum 30% size and weight reduction using high performance gapped amorphous ribbon cores instead of conventional cores of silicon steel or powdered iron.

Alpha-Core's smaller inductors combine high inductance and current levels with low losses at frequencies in the 20 KHz range. The reduced size benefit switching mode power supplies, UPS systems, variable frequency inverters and solar and wind power systems.

For more information please visit [www.alphacoredirect.com](http://www.alphacoredirect.com) or call the factory sales department at 1 203 954-0050, toll free 1800 836 5920 or email to [sales@alphacoredirect.com](mailto:sales@alphacoredirect.com)

*Alpha-Core Inc. was founded in Bridgeport, CT by Ulrik Poulsen in 1982. In 2008 the company moved to its own 40,000 sq.ft modern plant in Shelton, CT and became a division of the newly formed Bridgeport Magnetics Group Inc. Tortran and Goertz Audio Products are two other divisions.*
